DETAILED ACTION

Election/Restrictions

Claims 3-14 and 16-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11/21/06.

Drawings

The drawings were received on 6/4/04. These drawings are acceptable.

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because the abstract should avoid the word "invention." Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 2 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoon (US 4981149) in view of Hubbard (3308820).

Yoon teaches a hollow suturing needle (60) comprising an internal cavity wherein a drug to be dispensed can be released by holes extending through walls communicating with the lumen and sealed in the suture needle by attachment of suture material which does not extend the length of the lumen, and wherein the fluid may be an antibiotic (Column 7, proximate lines 4-20).

Yoon fails to teach a compressed gas residing between the fluid and the non-hollow portion or seal. Hubbard teaches a device having an internal cavity therein comprising: a proximal end (18), a distal end (16), a point on the distal end (fig. 2), an opening at or in the proximity of the distal end, and a non-hollow portion or seal at or

Art Unit: 3731

adjacent to the proximal end (16); wherein the internal cavity is in fluid communication with said opening at one end and terminates at said non-hollow portion or seal at the other end (fig. 1); a fluid (M) residing within the internal cavity; and a compressed gas (G) residing between the fluid (M) and the non-hollow portion or seal (18), (Columns 3-4, proximate lines 60-75 and 1-5 respectively), in order to provide a disposable fluid dispensing device that is simple to manufacture and provides effective ejection of medicine from the device. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the device of Yoon with the pressurized gas ejection mechanism of Hubbard in order to provide a disposable needle that is simple to manufacture and provides effective ejection of medicine from the device.
